**Your oil tank could be emptied
without you even knowing!**

The rise in oil prices has resulted in a dramatic increase in fuel theft. Don't become a victim, secure your oil supply with OilSecure...

The **Secure** choice in **Oil** tank protection

There's a new crime hitting homes, farms and businesses across the UK, and thieves don't even need to break into your premises to steal £'000's

The Problem

- The rising cost of oil has seen a dramatic increase in the theft of fuel and heating oil.
- Heating oil theft is up 22.2% across the UK, whilst in some parts it's up by over 1,100%¹.

"It's like having a tank of liquid gold sitting in your drive way".

The Solution

- OilSecure Oil Tank Alarm: a fully self contained alarm system that alerts you when thieves attempt to access your oil tank.
- Suitable for most types of oil tank.

The OilSecure system:

- ⇒ Is battery operated with no mains power required - ideal for remote locations;
- ⇒ Requires no drilling of the tank which may void your tank guarantee;
- ⇒ Sensors concealed within the tank so they cannot be seen by thieves;
- ⇒ Uses Yale wireless technology;
- ⇒ Can easily be turned off and on by a unique remote controller;
- ⇒ Can be expertly fitted in less than an hour² or is capable of DIY installation.

OilSecure
PROTECTING YOUR OIL SUPPLY

Each OilSecure system is designed to provide you with everything you need to protect the main filling caps on your oil tank.

Unlike other systems that require large boxes to be mounted on your tank, OilSecure sensors are fully concealed within your tank with no part of the system visible from the outside that could be tampered with.

Using tried and tested technology, the OilSecure Oil Tank Alarm is a battery powered wireless system requiring no mains electricity. The main siren unit is mounted out of reach of potential thieves and includes an anti-tamper device.

At the touch of a button the system is easily armed and any attempt to gain access into the tank is detected by one of the OilSecure sensors, which then activates an audible and visual alarm. The system has an option to call pre-set telephone numbers in the event of activation (via additional add on unit), or be integrated into a Yale home security system.

At less than 10% of the cost of the average tank fill, OilSecure is a highly cost effective way of deterring and detecting theft from your tank.
